PORR to modernise two more quays in Port of Gdańsk

Warsaw, March 21, 2024 - PORR S.A. has signed a contract with the Port of Gdańsk for the modernization of Rudowe and Bytomskie Quays. The total length of the quays to be reconstructed is over 450 meters. The investment is part of a larger project, which has been subsidized by the Connecting Europe Facility 2021-2027 (CEF 2). The total value of the signed contracts for construction works is PLN 142 million gross, of which PLN 51 million is for the Bytomskie quay and PLN 91 million for the Rudowe quay. The investment is expected to be completed in less than two years.

The expansion of Rudowe Quay III will include a 232.5-meter-long section and an 18-meter-long section of the Administrative Quay. The project will include the construction of a new quay with a slab structure supported on a grid of reinforced concrete piles, with a steel combined sheet pile wall in front. The quay will also feature a 265-meter-long railroad track. As a result of the dredging work, part of the Mining Basin will be deepened to 11.20 m (currently from 6.1 to 10.2 m).

As for the Bytomskie quay, the modernization will include two sections: a slab section of about 143 m and a slope section of 60 m. With this task, the quay will be extended to 203 m as a result of the flooding of the 60 m slope wharf. Like the Rudowe quay, the new Bytomskie quay will have a slab structure supported by a grid of reinforced concrete piles, with a steel combined sheet pile wall in front. The quay will be surfaced with cement concrete reinforced with dispersed reinforcement. As a result of the dredging work, the parts at the quay will be deepened to 10.20 meters (currently about 6 meters).

For both quays, a new water supply system, a storm drainage system with a treatment system, a power grid and new energy-efficient lighting will also be built. The quays will be equipped with point fenders and mooring bollards with a capacity of 100T. The construction of the quays is to be prepared for the later implementation of a system for supplying ships from land while at berth - the so-called OPS.

Facts and figures at a glance:

Project type:	The modernization of Rudowe and Bytomskie Quays
Scope of works:	Build
Client:	Port of Gdańsk
Contractor:	PORR S.A.
Contract value:	PLN 142 million gross
Time for execution:	2 years
